Crawling

Samuel Vliezen
Performance start and finish performance move at least simultaneous, but not exactly.

The maximum length of a loop is two systems.

Loops can go across systems and pages. Each performer playing material from the previous system (N-1) will not start playing material from the next system (N+1) until all loops can go across systems and pages. But a performer playing on system N will not start playing material from the next system N+1 until all loops can go across systems and pages.
